I. PROBLEM DEFINITION

There is a customer named 'A', he is very headache when facing with lots of bills and books every day. While other stores all use software to manage the store, Mr. A still manages the store in a traditional fashion every day. Mr. A wanted to build a store management software for his shop, so he went to meet the programmers to order. Programmers introduced Mr. A to the benefits of using management programs compared to traditional-style management.

- Advantages when using management program:
 - Save time and cost
 - Effectively manage resources.
 - Suitable for all businesses.
 - Coordinate different departments
 - Improve management ability.
 - Handling a large amount of data.
 - Improve business efficiency.

II. USER REQUIREMENT

1. Functions requirement

a) List inputs to the application:

- Information of products.
- Information of invoices.
- Information of customers.
- Information of employees.
- Information of orders, ordered items
- Information of prices.

b) List outputs expected from the application

- Information of sold products.
- Quantity of remaining products.
- The bills.

c) Overview of processes involved in the application

- Get prices, customers information, ordered items, employees' information.
- Calculate the bills.
- Update available items in the store and warehouse.
- Export the bills.

2. Hardware requirement:

a) Client Computer:

CPU	Intel Core i5 4 th Gen or higher
Ram	4GB
Storage	HDD: 10GB

b) Server Computer:

CPU	Intel Quad-core Q6600 or higher
Ram	8GB
Storage	HDD: 10GB

3. Software requirement:

a) Client Computer:

Operating system	Window 7 or higher		
JRE	1.8 or higher		

b) Server Computer:

Operating system	Window Server 2008 or higher
Database system	Microsoft SQL Server 2017

III. SCHEDULE AND ROLE

1. Role details:

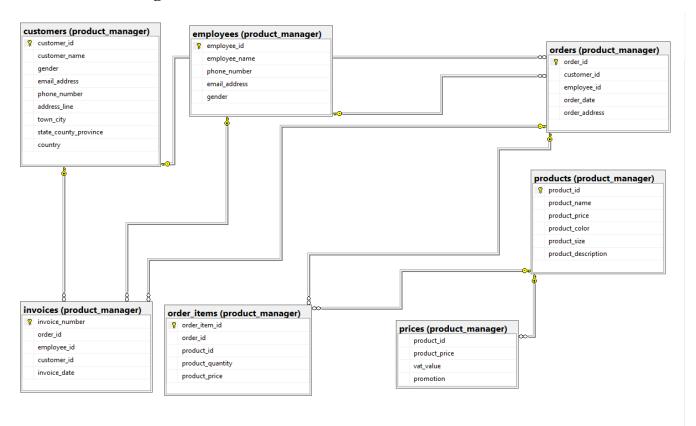

Order	Member	Role	Responsibilities	
1	Phat	Group leader	Manage the project	
2	Hoa, Phat, Ngoan	Analyst Define problem, input, output, procedure Determinate how to see problem tog		
3	Ngoan, Hoa	Designer	Design interface	
4	Phat, Ngoan, Hoa	Programmer	Program all functions for applications.	
5	Hoa, Phat, Ngoan	Tester	Testing all functions which have been programming	

2. Schedule details:

Order	Project title	Planned Start Date	Hour	Members' names
1	Cover	05/03/2019	0.5	Hoa
2	Problem definition	20/01/2019	0.5	Ngoan
4	User requirement	05/03/2019	0.5	Hoa, Ngoan
5	Code – interface	21/03/2019	2	Ngoan, Hoa
6	Code – backend	21/03/2019	5	Phat, Ngoan, Hoa
7	Schedule and role	05/03/2019	0.5	Ноа
8	Database diagram	20/01/2019	1	Ноа
9	Class diagram	05/03/2019	1	Ngoan, Phat
10	Test	23/03/2019	1	Ngoan, Hoa
11	Debug	23/03/2019	2	Ngoan, Phat, Hoa
12	Maintenance	23/03/2019	1.5	Ngoan, Hoa
13	Checklist	23/03/2019	0.5	Ngoan

IV. DESIGN PATTERN

1. Database diagram

2. Database detail:

a) Customers table

Field name	Data type	Constraints	Description
customer_id	Int	primary key	Customer's ID
customer_name	nvarchar(50)	not null	Customer's name
gender	nvarchar(50)	not null	Customer's gender
email_address	nvarchar(50)	not null	Customer's email address
phone_number	nvarchar(50)	not null	Customer's phone number
address_line	nvarchar(50)	not null	Customer's address line
town_city	nvarchar(50)	not null	Customer's town or city
state_county_province	nvarchar(50)	not null	Customer's state or province
country	nvarchar(50)	not null	Customer's country

b) Employees table

Field name	Data type	Constraints	Description
employee_id	int	primary key	Employee's ID
employee_name	nvarchar(50)	not null	Employee's name
gender	nvarchar(50)	not null	Employee's gender
email_address	nvarchar(50)	not null	Employee's email address
phone_number	nvarchar(50)	not null	Employee's phone number

c) Invoices table

Field name	Data type	Constraints	Description
invoice_number	int	primary key	Invoice's number
order_id	int	foreign key	Order's ID
employee_id	int	foreign key	Employee's ID
customer_id	int	foreign key	Customer's ID
invoice_date	date	not null	Invoice's date

d) Orders table

Field name	Data type	Constraints	Description
order_id	int	primary key	Order's ID
employee_id	int	foreign key	Employee's ID
customer_id	int	foreign key	Customer's ID
date_order	date	not null	Order's date
address_order	nvarchar(50)	not null	Order's address

e) Order items table

Field name	Data type	Constraints	Description
order_item_id	int	primary key	Order item's ID
order_id	int	foreign key	Order's ID
product_id	int	foreign key	Product's ID
product_price	float	not null	Product's price
product_quantity	nvarchar(50)	not null	Product's quantity

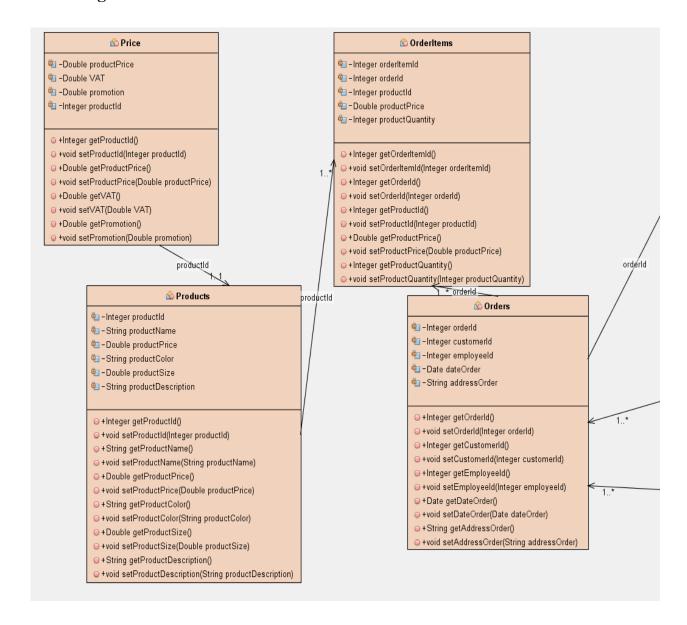

f) Price table

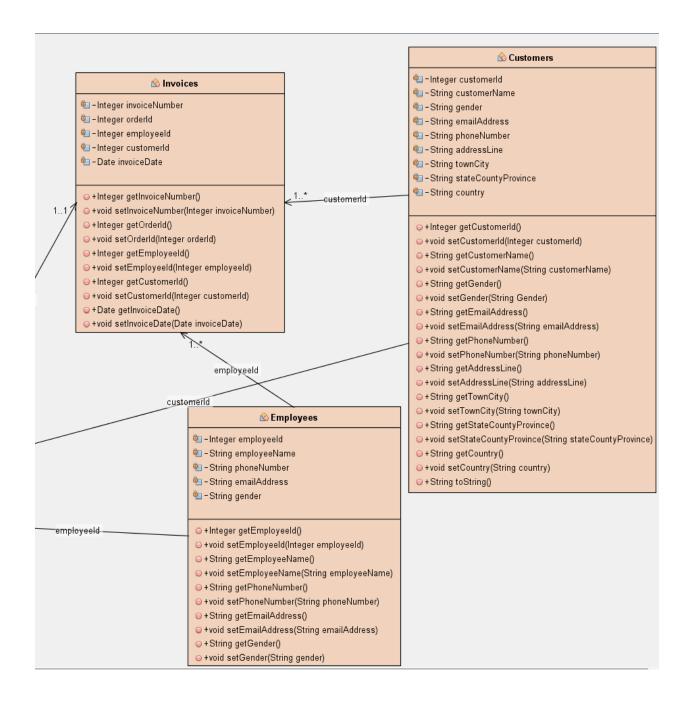

Field name	Data type	Constraints	Description
order_item_id	int	primary key	Order item's ID
order_id	int	foreign key	Order's ID
product_id	int	foreign key	Product's ID
product_price	float	not null	Product's price
product_quantity	int	not null	Product's quantity

g) Products table

Field name	Data type	Constraints	Description
product_id	int	foreign key	Product's ID
product_name	nvarchar(50)	not null	Product's name
product_price	float	not null	Product's price
product_color	nvarchar(50)	not null	Product's color
product_size	float	not null	Product's size
product_description	nvarchar(500)	not null	Product's description

3. Class diagram

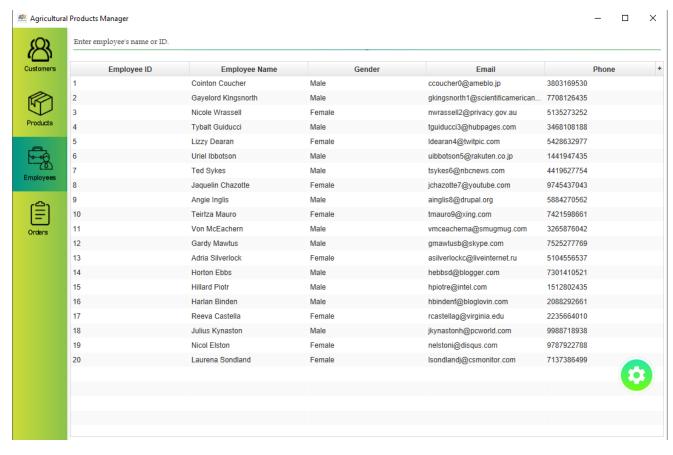

4. Interface

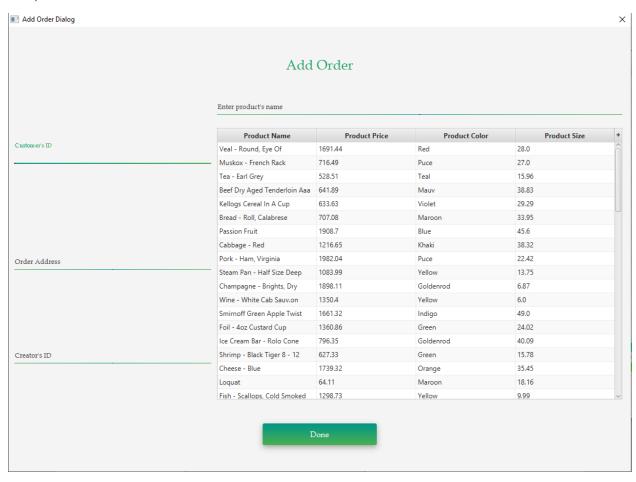

a) Interface displays information of customers

b) Interface displays information of employees

c) Interface to add an order

d. Interface to add the quantity of products

V. MAINTENANCE

- Backup document on Google drive and three laptops of Ngoan, Phat and Hoa.
- Backup code on Github and Google drive.
- Backup daily.
- Backup the database weekly.

VI. CHECKLIST
